

Information About This Service

Service Description

EFM is a bonded copper Ethernet service with a maximum download speed of up to 20 Mbps. Depending on the distance from the exchange these speeds will vary.

Availability

Available in selected areas of Australia and dependant on the carrier availability. Speeds might vary because of factors like connectivity, distance from exchange quality of copper, electrical interferences, cabling, RIM or pair gain systems.

Equipment Required

A compatible router on the premises is needed.

Minimum Term

The contract is for about 24 or 36 months including (Services). Install fees apply for services of less than 36 months.

Bundling Arrangements

No bundling is required with this service.
